

Project 3: Sights & Sounds (Media Integration)

Unit 5: Chapter 8 Portfolio Enhancement

Project Objective

Your goal is to transform your static custom website into a rich, sensory experience. You will integrate high-performance imagery, scalable branding, ethical media embeds, and organized data tables. By the end of this project, your site will not only look professional but will be optimized for speed and accessibility.

(Note: To conserve server bandwidth, you are NOT required to host native `.mp4` or `.mp3` files for this project. All video content will be handled via external embeds).

Project Milestones & Employability Focus

Milestone 1: Raster Optimization (Photoshop)

Focus: Positive Work Ethic (1.1.1) & Resource Management (1.2.8)

- **Goal:** Gather at least 3-5 high-resolution photos for your site.
- **Action:** Use Photoshop's "Save for Web (Legacy)" feature. Crop and resize to a maximum width of 1000px.
- **Deliverable:** Export your photos as High-Compression JPGs or WebPs. Your target file size is under 200KB per image.

Milestone 2: Responsive Imagery (HTML5)

Focus: Problem Solving (1.2.3) & Information Technology (1.3.2)

- **Goal:** Ensure images load efficiently on both mobile and desktop.
- **Action:** Utilize the `<figure>`, `<figcaption>`, and `srcset` attributes.
- **Deliverable:** Implement a hero image with at least two screen-size variants that swap automatically based on the device width.

Milestone 3: The SVG Logo & Favicons (Illustrator)

Focus: Creativity (1.1.7) & Job-Specific Tech (1.3.1)

- **Goal:** Create a crisp, professional brand icon that looks perfect on any device.
- **Action:** In Adobe Illustrator, use "Create Outlines" and the Pathfinder tool to design a personal brand logo. Export as an SVG. Use a generator to create a Favicon package.
- **Deliverable:** Embed the SVG into your site's navigation/header and link the Favicons in the `<head>` of every page.

Milestone 4: Ethical Embedding (Iframes)

Focus: Integrity (1.1.2) & Internet Safety (1.3.3)

- **Goal:** Add heavy video and location data without consuming your own server bandwidth.
- **Action:** Locate a relevant YouTube video and a Google Map location.
- **Deliverable:** Embed both using the `<iframe>` tag.

Milestone 5: Semantic Data Tables

Focus: Reading & Writing Documents (1.2.2)

- **Goal:** Display tabular data (pricing, schedules, statistics) accessibly.
- **Action:** Build an HTML table utilizing `<thead>`, `<tbody>`, `<tfoot>`, and `<th>` tags.
- **Deliverable:** Structure the table correctly and use the `colspan` attribute to merge cells in your footer or header.

Milestone 6: Proportions & Hover Effects (CSS)

Focus: Mathematics Skills (1.2.9) & Critical Thinking (1.2.3)

- **Goal:** Prevent media distortion and provide interactive UI feedback.
- **Action:** Apply `object-fit: cover` to hero images and profile pictures. Add CSS `:hover` transformations (like scaling or drop shadows) to interactive elements.
- **Deliverable:** A CSS stylesheet that prevents all image stretching and includes smooth, professional hover transitions.

Milestone 7: The Lighthouse Audit (QA)

Focus: Continuous Learning (1.2.6) & Problem Solving (1.2.3)

- **Goal:** Prove your code meets professional industry standards.
- **Action:** Run a Google Chrome Lighthouse Audit on your completed site.
- **Deliverable:** Document your "Performance" and "Accessibility" scores, ensuring no

broken image links (404s) exist.

Grading Rubric & Proficiency Scale (100 pts)

Proficiency Scale: Media Integration

(Targets: NV 4.5.1, 4.5.5, 4.4.6 | WRS 1.1.1, 1.1.2, 1.2.3)

Score	Performance Indicators
4.0 (Advanced) Digital Architect	You deploy high-performance media using <code>srcset</code> logic. Your SVG logo is mathematically clean (outlines created). You ethically embed fully responsive IFrames. Your tables pass strict screen-reader audits. You demonstrate strict ethical adherence to accessibility (<code>alt</code> tags). CSS <code>object-fit</code> and hover transitions are flawless. Lighthouse score is 90+ with zero broken links.
3.0 (Mastery) Practitioner	You correctly implement highly compressed images, <code>srcset</code> , SVGs, and Favicons. You successfully embed IFrames. Your tables use proper semantic structures (<code>colspan</code>). All layout proportions are maintained perfectly with CSS (<code>object-fit</code>). Most media has accurate <code>alt</code> text.
2.0 (Foundational) Apprentice	You can add media and IFrames but they may break layouts or overflow. You can identify basic table syntax and accessibility rules but require guidance to resolve broken links, missing <code>alt</code> tags, table math, or <code>object-fit</code> distortion issues.
1.0 (Novice) Beginner	You use unoptimized images that heavily slow down the site. You struggle to implement media embeds or basic table structures. Major errors persist with accessibility, distorted media, broken links, or failing Lighthouse scores.

Detailed Point Breakdown

1. Optimization & Responsive (20 pts)

- **4.0 (Advanced / 20 pts) - Digital Architect:** All images use `srcset` with multiple perfectly scaled breakpoints. File sizes are ruthlessly optimized (under 200KB). Semantic `<figure>` and `<figcaption>` tags are used flawlessly.
- **3.0 (Mastery / 17 pts) - Practitioner:** Images are compressed and `srcset` is

implemented. Semantic tags are present but may have minor structural flaws.

- **2.0 (Foundational / 14 pts) - Apprentice:** Images are added but lack `srcset` or are poorly compressed, resulting in large file sizes.
- **1.0 (Novice / 10 pts) - Beginner:** Images are unoptimized straight from the source, causing massive load times.

2. Branding & Favicons (20 pts)

- **4.0 (Advanced / 20 pts) - Digital Architect:** SVG logo is mathematically clean (outlines created) and implemented inline or via `img` tag. Favicons appear flawlessly on all pages.
- **3.0 (Mastery / 17 pts) - Practitioner:** SVG logo and Favicons are present and working on most pages.
- **2.0 (Foundational / 14 pts) - Apprentice:** Logo is present but exported as a Raster (PNG/JPG) instead of Vector (SVG), or Favicons are missing from sub-pages.
- **1.0 (Novice / 10 pts) - Beginner:** Missing branding elements or broken SVG code.

3. Media Embeds (Iframes) (15 pts)

- **4.0 (Advanced / 15 pts) - Digital Architect:** YouTube and Map iframes are used ethically, wrapped in responsive CSS containers (aspect-ratio), and scale perfectly on mobile.
- **3.0 (Mastery / 13 pts) - Practitioner:** Iframes are embedded and functional, but may lack perfect mobile responsiveness.
- **2.0 (Foundational / 10.5 pts) - Apprentice:** Embeds are present but break the layout or overflow off the screen.
- **1.0 (Novice / 7.5 pts) - Beginner:** Missing embeds or broken iframe syntax.

4. Accessibility (15 pts)

- **4.0 (Advanced / 15 pts) - Digital Architect:** Flawless accessibility integration. Media passes strict screen-reader audits. Every single image has contextually accurate, descriptive `alt` text.
- **3.0 (Mastery / 13 pts) - Practitioner:** Most images have `alt` text, but some may be vague or incorrectly left blank.
- **2.0 (Foundational / 10.5 pts) - Apprentice:** Understands accessibility basics but requires guidance to properly implement semantic tags or missing `alt` attributes.
- **1.0 (Novice / 7.5 pts) - Beginner:** Major accessibility errors; `alt` tags are entirely missing across the project.

5. Data Structure (20 pts)

- **4.0 (Advanced / 20 pts) - Digital Architect:** Tables pass strict screen-reader audits (`<thead>`, `<tbody>`, `<th>`). Calculates and implements `colspan` correctly based on strict mathematical grid logic.

- **3.0 (Mastery / 17 pts) - Practitioner:** Tables use proper HTML5 structures. `colspan` is used effectively.
- **2.0 (Foundational / 14 pts) - Apprentice:** Can identify basic table syntax but requires guidance to resolve table math, grid alignment, or `colspan` logic.
- **1.0 (Novice / 10 pts) - Beginner:** Partial success identifying table structures, but major errors persist in layout or grid math.

6. QA & Proportions (10 pts)

- **4.0 (Advanced / 10 pts) - Digital Architect:** Lighthouse score is 90+ overall. Zero broken links. CSS `object-fit` and hover transitions are flawless.
- **3.0 (Mastery / 8.5 pts) - Practitioner:** Layout proportions are maintained perfectly with CSS (`object-fit` prevents distortion). No broken links exist.
- **2.0 (Foundational / 7 pts) - Apprentice:** Identifies basic CSS syntax but requires guidance to resolve broken links or `object-fit` media distortion issues.
- **1.0 (Novice / 5 pts) - Beginner:** Needs significant help; major errors persist with distorted media, broken links, or failing Lighthouse scores.
