

Unit 6 | Chapter 9: Intro to JavaScript (Variables, Functions & Events)

Learning Targets:	
❖ Technical: I can identify and use JavaScript data types (Primitives vs. Objects) and operators (Arithmetic, Logical, and Assignment). (NV 5.3.1) ❖ Technical: I can write functional code using parameters, return values, and proper scope (Global vs. Local). (NV 5.3.2) ❖ Technical: I can implement event listeners and control flow (if/else) to create interactive logical paths. (NV 5.3.4) ❖ Employability: I can demonstrate analytical reasoning and cognitive flexibility to independently debug syntax and reference errors in the browser console. (WRS 1.2.3) ❖ Employability: I can demonstrate diligence, probity, and professional decorum by writing clean, original code that uses camelCase naming conventions and maintains organized logic. (WRS 1.1.1, 1.1.2, 1.1.4)	
Compelling Question:	
How does a developer use "The Brains" of the web to transform a static document into a living, breathing, and interactive user experience?	
Score	Performance Indicators
4.0	I can: ☐ Create a dynamic application that generates new HTML elements (createElement) and appends them to the DOM based on user input, demonstrating advanced analytical reasoning and systematic resolution of logic flaws. (NV 5.3.4, WRS 1.2.3) ☐ Build a function utilizing Template Literals and Logical Operators (&&, , !) to return complex data based on multiple input parameters while maintaining strict probity in variable scoping. (NV 5.3.2, WRS 1.1.2) ☐ Demonstrate the "Curb Cut Effect" in code by using event.preventDefault() to create custom accessible validation, demonstrating profound cultural competency and empathy for end users. (NV 5.3.4, WRS 1.1.5)
3.5	In addition to score 3.0 performance, partial success at score 4.0 content.
3.0	I can: ☐ Use querySelector to target elements and modify their .innerText, .value, or .style properties, applying analytical reasoning to connect HTML with JS. (NV 5.3.4, WRS 1.2.3) ☐ Write reusable functions that accept parameters and utilize the return keyword, exhibiting professional decorum in naming conventions. (NV 5.3.2, 

	WRS 1.1.4) ☐ Implement addEventListener for click and input events to trigger interactive UI changes. ☐ Demonstrate intrinsic motivation and punctuality by completing daily coding labs on schedule. (WRS 1.1.1)
2.5	No major errors or omissions regarding score 2.0 content, and partial success at score 3.0 content.
2.0	I can ☐ Define common terminology and identify syntax: ☐ let vs. const, Primitives (Strings, Numbers, Booleans), function, return, if/else, strict equality (===), querySelector, addEventListener, Console, and the DOM. (NV 5.3.1, 5.3.2, 5.3.4) ☐ Identify the importance of punctuality and diligence (WRS 1.1.1), probity in writing original code (WRS 1.1.2), professional decorum in camelCase naming (WRS 1.1.4), inclusive collaboration (WRS 1.1.5), and applying analytical reasoning to debug scripts (WRS 1.2.3).
1.5	Partial success at score 2.0 content, and major errors or omissions at 3.0.
1.0	With help, partial success at score 2.0 and score 3.0 content.
0.5	With help, partial success at score 2.0 but not at score 3.0 content.
0.0	Even with help, no success or attempt made.
