

Unit 9 | Chapter 16: Deployment (FTP, Netlify & Live Testing)

Learning Targets:	
❖ Technical: I can demonstrate the process of deploying a website to a live production environment using SFTP (Secure File Transfer Protocol). (NV 6.2.1) ❖ Technical: I can implement automated "Continuous Deployment" using cloud platforms like Netlify or GitHub Pages. (NV 6.2.2) ❖ Technical: I can perform a pre-launch Quality Assurance (QA) audit, including broken link checks, cross-browser testing, and performance scoring. (NV 6.2.1) ❖ Technical: I can explain the role of DNS (Domain Name System) and SSL in moving a site from a temporary URL to a custom domain. (NV 6.2.1) ❖ Employability: I can demonstrate analytical reasoning and cognitive flexibility to troubleshoot deployment failures, such as incorrect file paths or server-side permission errors. (WRS 1.2.3) ❖ Employability: I can demonstrate diligence, probity, and professional decorum by conducting final security checks and ensuring all project assets are ethically licensed before public release. (WRS 1.1.1, 1.1.2, 1.1.4)	
Compelling Question:	
How does a developer bridge the gap between "Localhost" and the global internet while maintaining performance, security, and professional integrity?	
Score	Performance Indicators
4.0	I can: ☐ Architect a "Zero-Downtime" deployment pipeline that utilizes GitHub Hooks to automatically update a live site upon every code commit, demonstrating advanced analytical reasoning. (NV 6.2.2, WRS 1.2.3) ☐ Execute a comprehensive Performance Audit (e.g., Google Lighthouse) and achieve a 90+ score by optimizing critical rendering paths and asset compression. (NV 6.2.1, WRS 1.1.1) ☐ Demonstrate profound cultural competency by ensuring the live site is fully WCAG compliant and accessible to global users before final hand-off. (WRS 1.1.5)
3.5	In addition to score 3.0 performance, partial success at score 4.0 content.
3.0	I can: ☐ Successfully deploy a multi-page website to a live URL using a cloud provider (like Netlify) or an SFTP client (like FileZilla). (NV 6.2.1) ☐ Conduct a pre-launch "Bug Bash" to identify and resolve broken 

	links and responsive layout shifts with systematic resolution. (NV 6.2.1, WRS 1.2.3) ☐ Configure basic SEO settings (Favicons, Meta Titles, Open Graph tags) to ensure professional decorum when shared on social media. (WRS 1.1.4) ☐ Demonstrate intrinsic motivation and punctuality by meeting the final production deadline without teacher intervention. (WRS 1.1.1)
2.5	No major errors or omissions regarding score 2.0 content, and partial success at score 3.0 content.
2.0	I can ☐ Define common terminology and identify syntax: ☐ Deployment, Localhost vs. Production, SFTP/FTP, Hosting, Domain Name, DNS, SSL (HTTPS), Continuous Deployment, QA (Quality Assurance), and Performance Audit. (NV 6.2.1) ☐ Identify the importance of punctuality in meeting client launch dates (WRS 1.1.1), probity in public code release (WRS 1.1.2), professional decorum in public portfolios (WRS 1.1.4), and applying analytical reasoning to server logs (WRS 1.2.3).
1.5	Partial success at score 2.0 content, and major errors or omissions at 3.0.
1.0	With help, partial success at score 2.0 and score 3.0 content.
0.5	With help, partial success at score 2.0 but not at score 3.0 content.
0.0	Even with help, no success or attempt made.
